

ZETARIS COMPLETES SUCCESSFUL \$30 MILLION CAPITAL RAISE TO DELIVER ITS LEADING DECENTRALIZED DATA PLATFORM IN THE US AND ASIA

MELBOURNE, AUSTRALIA April 6, 2022 -- Zetaris, the instant analytics on any data, anywhere company, today announced it completed a \$30 million funding round, valuing the company at over \$110 million and signalling a period of strong growth for the company.

The successful financing round was led by Exto Partners, with participation from In-Q-Tel, Reach Markets, Vulpes Ventures Singapore, 72 Capital and other investors. This investment takes Zetaris' total equity funding to over \$50 million and will see the business accelerating its growth in the USA, Asia and ANZ to capitalize on the global shift towards faster analytics on decentralized data.

Currently, most organizations are overwhelmed by data, housed across different systems. To create valuable insights, data needs to be moved or copied to a centralized data warehouse, data cloud or data lake. However, the volumes are high, there's lots of variation, it's time consuming, and there's greater margin for error in recoding and conforming these disparate volumes of data. Zetaris addresses these shortcomings of a centralised data model by bringing the analytics to the data.

Commenting on the latest capital raise, Founder and CEO Vinay Samuel said: "We are very pleased to have completed this successful round of funding and are grateful for the support of our investors. We regard this as an endorsement of the strength and quality of our technology, and our unique offering in the market. We're very excited about the near future for Zetaris."

"Our technology connects multiple databases and analyzes them together in real-time, without the time, cost, and risk of error associated with moving, recoding and storing data at a central location. Zetaris enables instant analytics on any data, anywhere, making data analytics more efficient, cost effective and secure.", Mr Samuel continued.

Will Deane, Managing Director of Exto Partners, said, "We continue to see leading enterprises shift away from centralised analytical platforms as they realise the cost benefits and the massive opportunity for improving customer success with effective real time data access across the enterprise and outside it. Exto believes Zetaris has an extraordinary future as the leading networked data platform delivering instant analytics across any data, anywhere."

"In-Q-Tel invested in Zetaris because it offers government and commercial users a new and fundamentally enhanced capability for critical decision making. Through its capability to cross-analyse datasets in different places over the Internet and private networks, Zetaris has created a new method for organisations to manage and derive insights from their data," said Clayton Williams, Managing Director for the Australia office of In-Q-Tel, the non-profit strategic investor for the U.S. intelligence community and its allies.

Among Zetaris' customers are leading telecommunications, banks, retail and government customers including Telstra, Optus, Nokia, BUPA, Melbourne Water and Murdoch Children's Research Institute.

About Zetaris

Zetaris was founded in 2013 by Vinay Samuel to disrupt the world by enabling instant analytics on decentralized data. Zetaris is solving real-world problems for data platform and analytics leaders.

The Zetaris Networked Data Platform is the world's fastest governed distributed data analytics platform reducing the need for duplicate data and providing significant cost savings for data projects.

Fundamentally, the Zetaris Networked Data Platform allows customers to link data from disparate sources and analyse it without the need to recode or physically copy it to a central location or data warehouse and all without saturating their networks in traffic or compromising security.
